

ascom PMS300

*The national management system
for distributed operation*

PMS300 is the key component for building up highly advanced distributed payphone and multimedia management solutions.

Used together with Ascom's PMS150, it provides the operator with a complete management solution ideally suited for large-scale installations and decentralized operational organizations.

Connected with several PMS150 regional centres in charge of day-to-day operations, the PMS300 national centre is ideal for controlling and monitoring the complete installation.
